## ABSTRACT:

PURPOSE: To realize a facsimile equipment and a communication method in which the color of a space is designated.

CONSTITUTION: A transmitter side facsimile equipment 1000 is provided with a communication control function 1100 generating communication information to store space color information designated by a receiver side facsimile equipment 2000 on a protocol in the case of communication, a communication function 1200 sending/receiving communication information, and an image processing function 1300 converting the space into image data according to the space color information. The receiver side facsimile equipment 2000 is provided with a designation function 2100 designating the space color information to reproduce the space depending on characteristics of output devices 5, 7 and a communication function 2200 sending/receiving the communication information storing the space color information.
